

MainWindow::MainWindow

```
graph LR; A[MainWindow::MainWindow] --> B[MainWindow::InitWidgets]; B --> C[MainWindow::togglePiecesView];
```

The diagram illustrates a three-step process for the MainWindow class. It begins with the 'MainWindow::MainWindow' constructor, which leads to the 'MainWindow::InitWidgets' initialization function. This function then triggers the 'MainWindow::togglePiecesView' method, which is highlighted in a grey box to indicate it is the final or active step in the sequence.

MainWindow::InitWidgets

MainWindow::togglePiecesView
